- The central (ongoing) debate in the philosophy of mathematics after the 1960s: Realism vs Anti-Realism
- Specifically, the Indispensability Argument from Quine is carefully reconsidered.
- And to a large extent, the debate takes place within the naturalistic line of thought: Burgess, Rosen, Colyvan, Baker, Field, Hoffman, Sober, Maddy, Chihara, Feng Ye, and etc.

Three
Post-Quinean
Naturalists

Some
Conclusive
Remarks

In this talk, I present three forms of naturalism in the philosophy of mathematics after Quine, which make their places by different responses to the aforementioned debate while sharing the same basic naturalistic principles:

- Burgess: realism
- Maddy: equalism
- Ye: anti-realism/nominalism

Post-Quinean
Naturalists

Some
Conclusive
Remarks

Plan of the rest talk:

- Introducing the Quinean context common to the three post-Quineans.
- Describing how the three post-Quinean naturalistic cases differ from Quine and each other.
- Some conclusive remarks.

The Quinean Context

Post-Quinean
Naturalism in
the
Philosophy of
Mathematics

Gao Kun

Introduction

The Quinean
Context

Three
Post-Quinean
Naturalists

Some
Conclusive
Remarks

Quine characterizes naturalism as:

- the abandonment of first philosophy
- the recognition of that it is within science the reality is identified and described

The fundamental idea is that no extra-scientific method of justification could be more convincing or reliable than the scientific ones, the best means we have.

The Quinean Context

Introduction

The Quinean
Context

Three
Post-Quinean
Naturalists

Some
Conclusive
Remarks

Thus:

- ontology naturalized: ontological questions are on a par with questions of natural science, ontological commitments of science.
- epistemology naturalized: how human animals arrive science, improving scientific methods within.

Philosophy is primarily the scientific study of science itself.

The Quinean Context

the
Philosophy of
Mathematics

Gao Kun

Introduction

The Quinean
Context

Three
Post-Quinean
Naturalists

Some
Conclusive
Remarks

the scientific study of science:

- confirmation holism
- theoretical virtues are the evidence at bottom, e.g., empirical adequacy/conformity to observation, simplicity, conservatism, generality, fecundity, refutability, etc

The Quinean Context

Introduction

The Quinean
Context

Three
Post-Quinean
Naturalists

Some
Conclusive
Remarks

Then comes the indispensability argument for mathematical objects, which depends on four premises:

- naturalism
- holism
- the criterion of ontological commitment of a theory
- the indispensability of reference to mathematical objects in science

Introduction

The Quinean
Context

Three
Post-Quinean
Naturalists

Some
Conclusive
Remarks

Summary:

- accept p iff p is sanctioned by scientific standards
- truth and existence confirmed holistically, so accept X iff X have such and such virtues
- mathematics is taken as a part of natural science, mathematical truth at the same status as empirical truth

Three Post-Quinean Naturalists

Post-Quinean
Naturalism in
the
Philosophy of
Mathematics

Gao Kun

Introduction

The Quinean
Context

Three
Post-Quinean
Naturalists

Some
Conclusive
Remarks

Among many post-Quinean naturalists in the philosophy of mathematics, I choose three representatives ranging from radical realist to radical anti-realist. In the following I will outline their different interpretations of the principles of naturalism and corresponding conclusions about the nature of mathematics. And firstly, let us consider Burgess.

Mathematics

Gao Kun

Introduction

The Quinean
Context

Three
Post-Quinean
Naturalists

Some
Conclusive
Remarks

Burgessian interpretation of the principles of naturalism:

- the X-standards: mathematics is a science in its own right, philosophers should respect scientists' literal understanding of the mathematical language.
- economy of abstract ontology is not among the theoretical virtues: *a matter to which most working scientists attach no importance whatsoever.*

Three Post-Quinean Naturalists

Philosophy of
Mathematics

Gao Kun

Introduction

The Quinean
Context

Three
Post-Quinean
Naturalists

Some
Conclusive
Remarks

Ontological conclusion:

- *A thorough-going naturalist would take the fact that abstracta are customary and convenient for the mathematical(as well as other) science to be sufficient to warrant acquiescing in their existence. (Burgess and Rosen, 1997)*
- our best scientific theory will include mathematical entities regardless of the success or failure of strenuous nominalistic efforts to remove them.

Three Post-Quinean Naturalists

Introduction

The Quinean
Context

Three
Post-Quinean
Naturalists

Some
Conclusive
Remarks

In contrast with Burgess, Maddy share Quine's starting point in natural science. However, she departs from Quine's naturalism in another sense. Let us also consider this.

Three Post-Quinean Naturalists

Post-Quinean
Naturalism in
the
Philosophy of
Mathematics

Gao Kun

Introduction

The Quinean
Context

Three
Post-Quinean
Naturalists

Some
Conclusive
Remarks

Maddy's interpretation of the principles of naturalism:

- the X-standards: second philosophy, taking natural science as the final arbiter of truth and existence.
- resisting holism, mathematical accounts of physical phenomenon are now not taken as literal truths but free-standing abstract models that resemble the world in complex ways.

Three Post-Quinean Naturalists

Post-Quinean
Naturalism in
the
Philosophy of
Mathematics

Gao Kun

Introduction

The Quinean
Context

Three
Post-Quinean
Naturalists

Some
Conclusive
Remarks

- mathematics is autonomous.
- double standards: distinguishing mathematics proper from the philosophy of mathematics.

Three Post-Quinean Naturalists

Naturalism in
the
Philosophy of
Mathematics

Gao Kun

Introduction

The Quinean
Context

Three
Post-Quinean
Naturalists

Some
Conclusive
Remarks

Ontological conclusions:

- Thin Realism and Arealism are equally accurate, second philosophical descriptions of the nature of pure mathematics
- Shift our attention away from the questions of truth and existence to the challenge of understanding the common objectivity, the mathematical depth, underlying both Thin Realism and Arealism.

Post-Quinean
Naturalism in
the
Philosophy of
Mathematics

Gao Kun

Introduction

The Quinean
Context

Three
Post-Quinean
Naturalists

Some
Conclusive
Remarks

Ye's interpretation of the principles of naturalism:

- taking natural science as the starting point, and the naturalistic view on cognitive subjects as the most important idea of naturalism.
- the human cognitive subject and process is a part of the physical world, homunculus fallacy.

Three Post-Quinean Naturalists

Post-Quinean
Naturalism in
the
Philosophy of
Mathematics

Gao Kun

Introduction

The Quinean
Context

Three
Post-Quinean
Naturalists

Some
Conclusive
Remarks

- Quine's misleading notions such as ontological commitment, disquotational theory of truth, and confirmation holism.
- naturalizing reference, truth, logical validity, modality, apriority, etc

Three Post-Quinean Naturalists

Post-Quinean
Naturalism in
the
Philosophy of
Mathematics

Gao Kun

Introduction

The Quinean
Context

Three
Post-Quinean
Naturalists

Some
Conclusive
Remarks

Ontological conclusion:

- what really exist in human mathematical practice are just neural activities in human brains.
- explaining all aspects of human mathematical practice by referring exclusively to physical things, especially the applicability of maths in science.
